Clinical Research Nurse

Wanida Wichaisak ,RN

Who is clinical research nurse?

- Clinical Trials Research Nurse is a clinical staff nurse whose primary role is to care for research participants who are involved in clinical trials. In addition to providing clinical care for the participant, a clinical trials nurse will give the patient informed consent and ensure that protocol is being followed at each and every step of the trial. The main roles assumed by a specialist within the area of clinical trial research include: assuring the safety of the participant, maintaining informed consent, accurate data collection, data recording, data management, study coordination and complying with regulatory requirements.
